Programmable Treasury Accounting, Stablecoin Cash Flow & Multi-Rail Settlement

Unifying corporate double-entry accounting truth, 24/7 stablecoin cash sweeps, and multi-rail routing — with **Supply Chain Finance & Receivables Factoring** as our high-yield flagship application across viable segments.

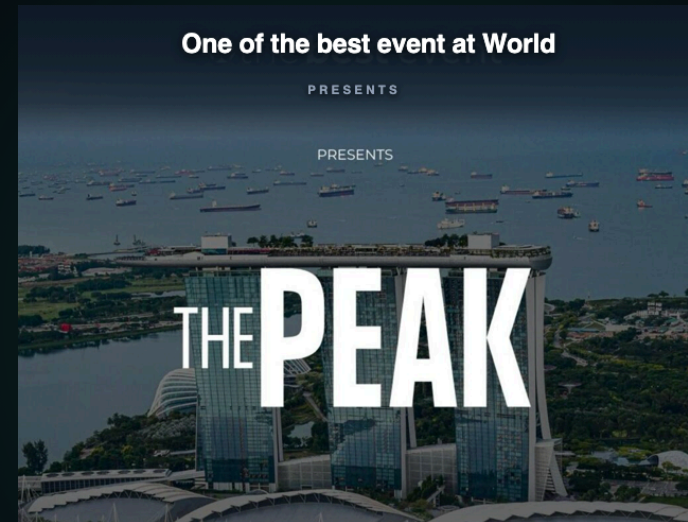

📄 Ask: \$1.25M Seed (15% Equity)

📈 Valuation: \$8.4M Post-Money

Premier Global Web3 & Token Showcase

Marina Bay Sands

Modernization joint with StableCoin Missed the "Core"

Non-accomplished success at ISO20022 programs and Blind spot remains in treasury-core architecture

❗ 01. Messaging ≠ Core Engine

ISO 20022 upgraded transaction messages, but internal bank cores and enterprise ERPs remain locked in batch-processed legacy ledgers.

↕ 02. The DLT Perimeter Rush

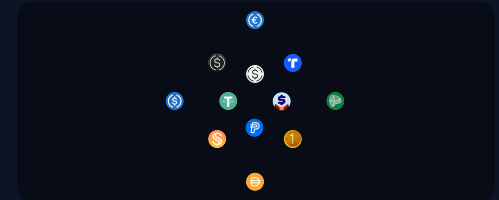

Institutions built outward wrappers rather than solving core ledger synchronization, creating isolated liquidity islands and reconciliation overhead.

🔒 03. The Control Vacuum

Simple wallet-to-wallet coin transfers lack double-entry bookkeeping, audit invariants, and corporate approval controls required by enterprise CFOs.

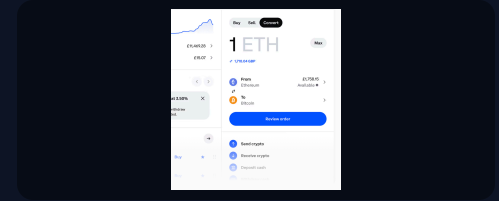

Liquidity Fragmentation

Diversity of chains and coins creates liquidity traps.

The Control Gap

Wallet transfers lack dual accounting reconciliation.

Enterprise Cash Flow & The Stablecoin Inflow Gap

Global B2B Value Transfer Relies on Broken 1970s Batch Banking Rails

⌚ \$150T Trapped Float

Corporate cash sits locked in multi-day bank transit, pre-funded correspondent buffer accounts, and Net-60 supplier invoice queues.

🔌 Disconnected Systems

ERP general ledgers, SWIFT wire networks, and customs waybills operate in isolated silos, creating manual reconciliation delays and fraud risk.

📉 3%–7% Fee Friction

Intermediary correspondent bank charges, opaque FX markups, and factoring broker commissions aggressively erode enterprise profit margins.

💡 THE TREASURER'S DILEMMA & CONNEXTIUM SOLUTION

Enterprises manage 21st-century supply chains with 1970s batch-processed banking rails. Treasurers need infrastructure to program real-time stablecoin cash flows, guarantee double-entry accounting truth, and capture early discount yields without taking balance-sheet volatility.

Multi-Trillion Dollar Market Opportunity

Capturing the enterprise transition to programmable liquidity and on-chain settlement from Asia's premier fintech hub

The Connexium Universal Platform Stack

Layered Architecture Connecting ERP Accounting Truth to Programmable Stablecoin Settlement

Layer 1: Application & Commercial Suite

Business Logic

Verity AI SCF: Dynamic discounting engine, CDSC milestone-escrow contracts, invoice tokenization, and dynamic supplier risk scoring.

Layer 2: Treasury Accounting & Invariant Core (GTT)

Double-Entry Engine

TigerBeetle Dual Ledgers: Real-time ERP chart of accounts synchronization, ADA sub-ledger accounting, zero-loss invariant validation.

Layer 3: Multi-Rail Routing & Settlement Engine

Interledger Router

ILP + Multi-Rail: Programmable routing across Circle USDC/EURC, ISO 20022 FedNow, SWIFT, and SEPA Instant payment rails.

Layer 4: Enterprise Integration & Compliance Gateway

SOC2 / MSB Ready

Connectors & Auditing: SAP/NetSuite ERP adapters, Fireblocks MPC custody, automated KYB/KYC and OFAC sanctions compliance.

Corporate Treasury Structure Embedded with Stablecoins

How Programmable Digital Asset Accounts (ADA) Transform Enterprise Working Capital

24/7 Automated Sweeps

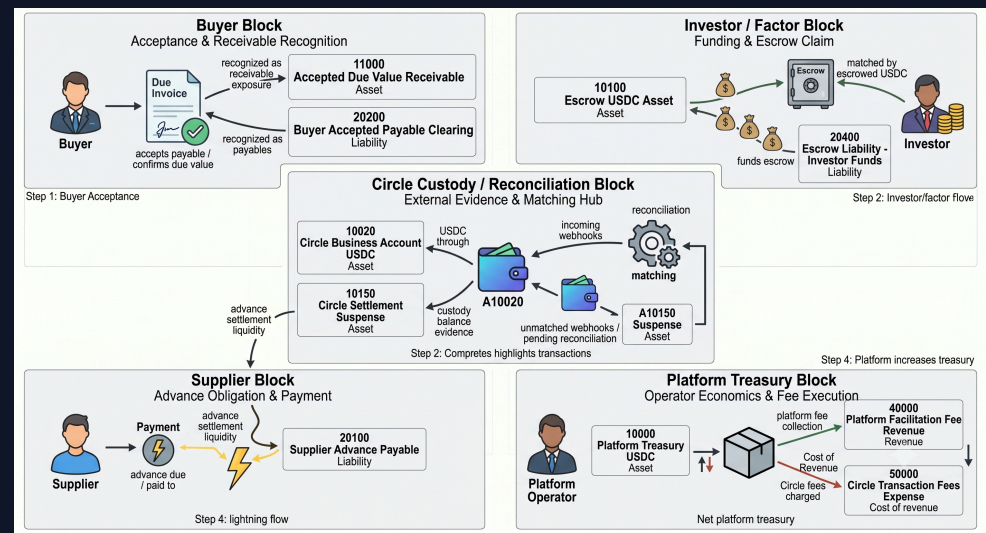

Idle enterprise cash automatically swept into yield-bearing USDC/EURC vaults in milliseconds.

Multi-ADA Sub-Ledgers

Segregated accounts for USD, EUR, SGD and on-chain liquidity synchronized with ERP chart of accounts.

8%–18% Yield Loop

Funds early invoice discounts via Verity dynamic factoring, transforming treasury into a profit center.

Treasury Architecture: ADA sub-ledgers integrating ERPs & stablecoin sweeps.

Case Study: Dual Accounting & Real-Time ERP Sync

Bridging Enterprise SAP/NetSuite General Ledgers with Cryptographic Invariant Settlement

Anchor Buyer T-Account (SAP / ERP)

Synced

Debit (Dr)

Accounts Payable (AP): \$100,000
(Liability Expunged)

—

Credit (Cr)

Cash / USDC Vault: \$98,000
(Settled)

Earned Cash Discount:
\$2,000 (2.0% Yield)

Supplier T-Account (NetSuite / ERP)

Instant Cash

Debit (Dr)

Cash / Stablecoin: \$98,000
(Available Day 1)

Financing Expense: \$2,000
(Working Capital)

Credit (Cr)

Accounts Receivable (AR):
\$100,000 (Closed)

—

✓ Enterprise Value Creation

Anchor buyers earn 8%–18% annualized APR by discounting invoices with idle stablecoin treasury float while suppliers receive immediate working capital.

🛡️ Solvency Invariant Proofs

TigerBeetle ledgers enforce strict zero-sum debit/credit balance invariants across all accounts on every transaction packet without exception.

Account Servicing & Liquidity Invariants

Mathematical Proofs Preventing Overdrafts, Double-Spend, and Reconciliation Discrepancies

⚖️ Zero-Sum Conservation

$\text{Sum}(\text{Debits}) = \text{Sum}(\text{Credits})$ Every

credit is mathematically paired with an exact debit. No balance changes in isolation.

🚫 Non-Negative ADA Vaults

$\text{Balance}(\text{ADA}) \geq 0$ Vault accounts

can never go negative. Overdrafts are rejected at the state machine core.

💎 Atomic Settlement (ILP)

`Commit || Rollback` Multi-rail

payments either execute completely across all ledgers or abort with zero loss.

🐞 TigerBeetle High-Throughput Financial State Machine

Engineered in Zig with deterministic simulation testing, delivering over **1,000,000 transactions per second** with strict durability and sub-millisecond ACID guarantees.

Case Study: Supply Chain Finance & Receivables Factoring

Unlocking Working Capital for Mid-Market Suppliers with Verity Dynamic Discounting

✖ The Traditional Factoring Trap

- **30–90 Day Delays:** Suppliers struggle with payroll while waiting for Net-60 payment terms.
- **Predatory Broker Fees:** Factoring companies charge 3%–6% per invoice (36%+ APR equivalent).
- **Manual Due Diligence:** Paper contracts, phone confirmations, and manual lien checks.

✔ The Connexium Verity Solution

- **Instant Day-1 Settlement:** Invoices approved in buyer ERP funded within seconds via USDC.
- **Fair Dynamic Pricing:** AI dynamically computes discounts based on counterparty score (1%–2%).
- **Automated Verification:** Digital bills of lading and ERP approvals validated on-chain.

Live Factoring Benchmark: Electronics & Agribusiness Trade Corridors (Singapore / APAC)

Avg Settlement Time: 2.8s

ADA Accounting Framework Applied on Factoring Finance

Multi-Party Ledger Orchestration Across Anchor Buyer, Supplier, and Liquidity Providers

Anchor Buyer ADA

Authorizes dynamic discount, debits AP in SAP ERP, and captures 2% cash discount yield.

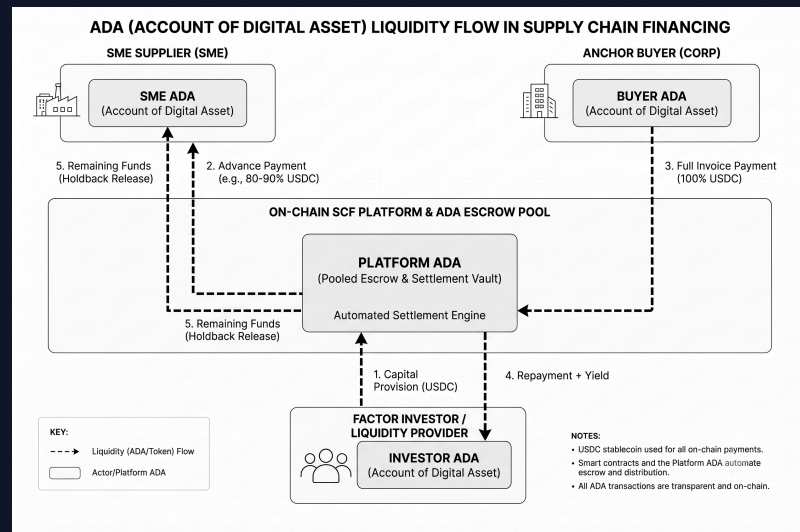

Liquidity Provider Vault

Funds factoring liquidity pools, disburses USDC in seconds, and captures 12% target APR.

Supplier Sub-Ledger

Receives Day-1 instant capital, bypasses predatory factoring brokers, and auto-reconciles NetSuite AR.

ADA Multi-Party Framework: Segregated digital asset sub-ledgers & proofs.

Verity AI Risk & CDSC Milestone Escrow

Continuous Delivery Smart Contracts (CDSC) with Real-Time Counterparty Underwriting

Verity AI Risk Engine

- **Real-Time Scoring:** Analyzes historical payment cadence, dispute rates, and ERP ledger continuity.
- **Dynamic Pricing Curves:** Adjusts discount fees in real time based on shipment milestones and risk metrics.
- **Fraud & Duplicate Detection:** Cryptographic invoice hashing prevents double-pledging across factoring facilities.

CDSC Milestone Escrow

- **Milestone-Triggered Unlocks:** Releases 30% on bill of lading, 50% on customs clearance, 20% on final delivery.
- **Automated Dispute Resolution:** Multi-sig oracle triggers escrow holds if shipment telematics trigger breach.
- **Streaming Cash Payouts:** Continuous micro-sweeps minimize counterparty default exposure.

Underwriting Accuracy: Over 99.4% precision in factoring default prevention in backtested datasets.

Ecosystem Recognition & Benchmarks

• Circle Fintech Bootcamp Selected:

Engineered stablecoin commerce & settlement on Circle USDC rails.

• Interledger Accelerator Architecture:

Completed full ILP account servicing specifications for tier-1 banks.

• Multi-Tenant Simulator & Ledger:

Live interactive T-Account ledger visualizer with active enterprise roles.

Multi-Stream Platform Business Model

Monetizing via SaaS Subscriptions, Transaction Flow Take Rates, and Liquidity Routing Spreads

SaaS Subscription

\$2.5k–\$15k / mo

Core ERP integration connector, real-time T-Account sync, and multi-tenant ledger management.

SCF Take Rate

15–40 bps

Basis points fee captured on total settled invoice factoring liquidity through Verity dynamic discounting.

Routing & Sweeps

5–15 bps

Cross-rail interledger routing fee and stablecoin cash sweep management on corporate float volume.

3–Year Financial Scaling Trajectory

Year 1 (Pilots): \$50M Settled Volume • 5 Anchors • **\$750k Net Rev**

Year 2 (Corridor): \$350M Settled Volume • 60 Anchors • **\$3.8M Net Rev**

Year 3 (Network): \$1.8B Settled Volume • 220 Anchors • **\$18.5M Net Rev**

Value Growing Plan: Milestones to Series A

Clear Execution Objectives Driving a 3x–5x Valuation Step-Up (\$25M–\$40M Valuation)

Seed: \$1.25M @ \$8.4M Valuation (15% Equity)

12–18 Mo Inflection >

Series A: \$25M–\$40M Valuation (3x–5x Step-Up)

Phase 1: Months 1–6

- Deploy 5 Enterprise Anchor pilots
- Complete SOC2 Type 1 audit (\$250k moat)
- Finalize MSB state compliance (BSA/AML)
- Onboard 25 suppliers onto Verity

Phase 2: Months 6–12

- Cross \$50M cumulative volume
- Expand to 30 enterprise anchors
- Integrate institutional liquidity pools
- Launch multi-currency EURC/SGD vaults

Phase 3: Months 12–18

- Reach \$250M annualized run-rate
- Hit \$3.5M+ ARR recurring run-rate
- Open API partner gateway
- Execute Series A (\$6M–\$10M raise)

The Ask: \$1.25M Seed Round (15% Equity)

Valuation round at \$8.4 M to scale payment routing & enterprise pilots

📄 Round Structure & Terms

Target Investment: **\$1,250,000**

Equity Offered: **15.0%**

Post-Money **\$8,333,333 (\$8.4 M)**

Valuation:

📊 Use of Funds (\$1.25M)

45% Platform Engineering	\$562.5k
25% Enterprise Pilots & GTM	\$312.5k
20% Compliance, SOC2 & MSB	\$250.0k
10% Operations & Capital	\$125.0k
