CONNEXTIUM.XYZ / FINUX LABS

D-SHARE

Concept

Global equity.
Stablecoin access.

Tokenized depository receipts.
For USDC and HSBC RedCoin holders.

Depository Securities Homing Access
to Receipted Equity

Raising US$3 million

Prime edition

USDC / USD HSBC RedCoin / HKD

High share prices and uneven global access

Six US-listed examples above US$1,000. Indicative quote snapshot, 30 October 2026.

Company	Ticker	US$ / share
NVR	NVR	5,958.56
AutoZone	AZO	3,169.82
Eli Lilly	LLY	1,417.54
W.W. Grainger	GWW	1,359.17
BlackRock	BLK	1,147.54
Costco	COST	1,012.28

A US$300 budget cannot buy one whole share in these examples

Local access varies

Eligible accounts, overseas funding rules and local product coverage can limit global investing access.

Fractional brokerage already helps some investors. Broker, customer and product eligibility still vary.

Global equity access for stablecoin adoption

Leading payments engineering to capital markets

35% to 42%

Digital merchant payments among adults in low- and middle-income countries, 2021 to 2024

World Bank Global Findex 2025

+9.8%

Latin America crypto economic activity, 12 months to June 2026 versus the previous 12 months

Chainalysis 2026 adoption report

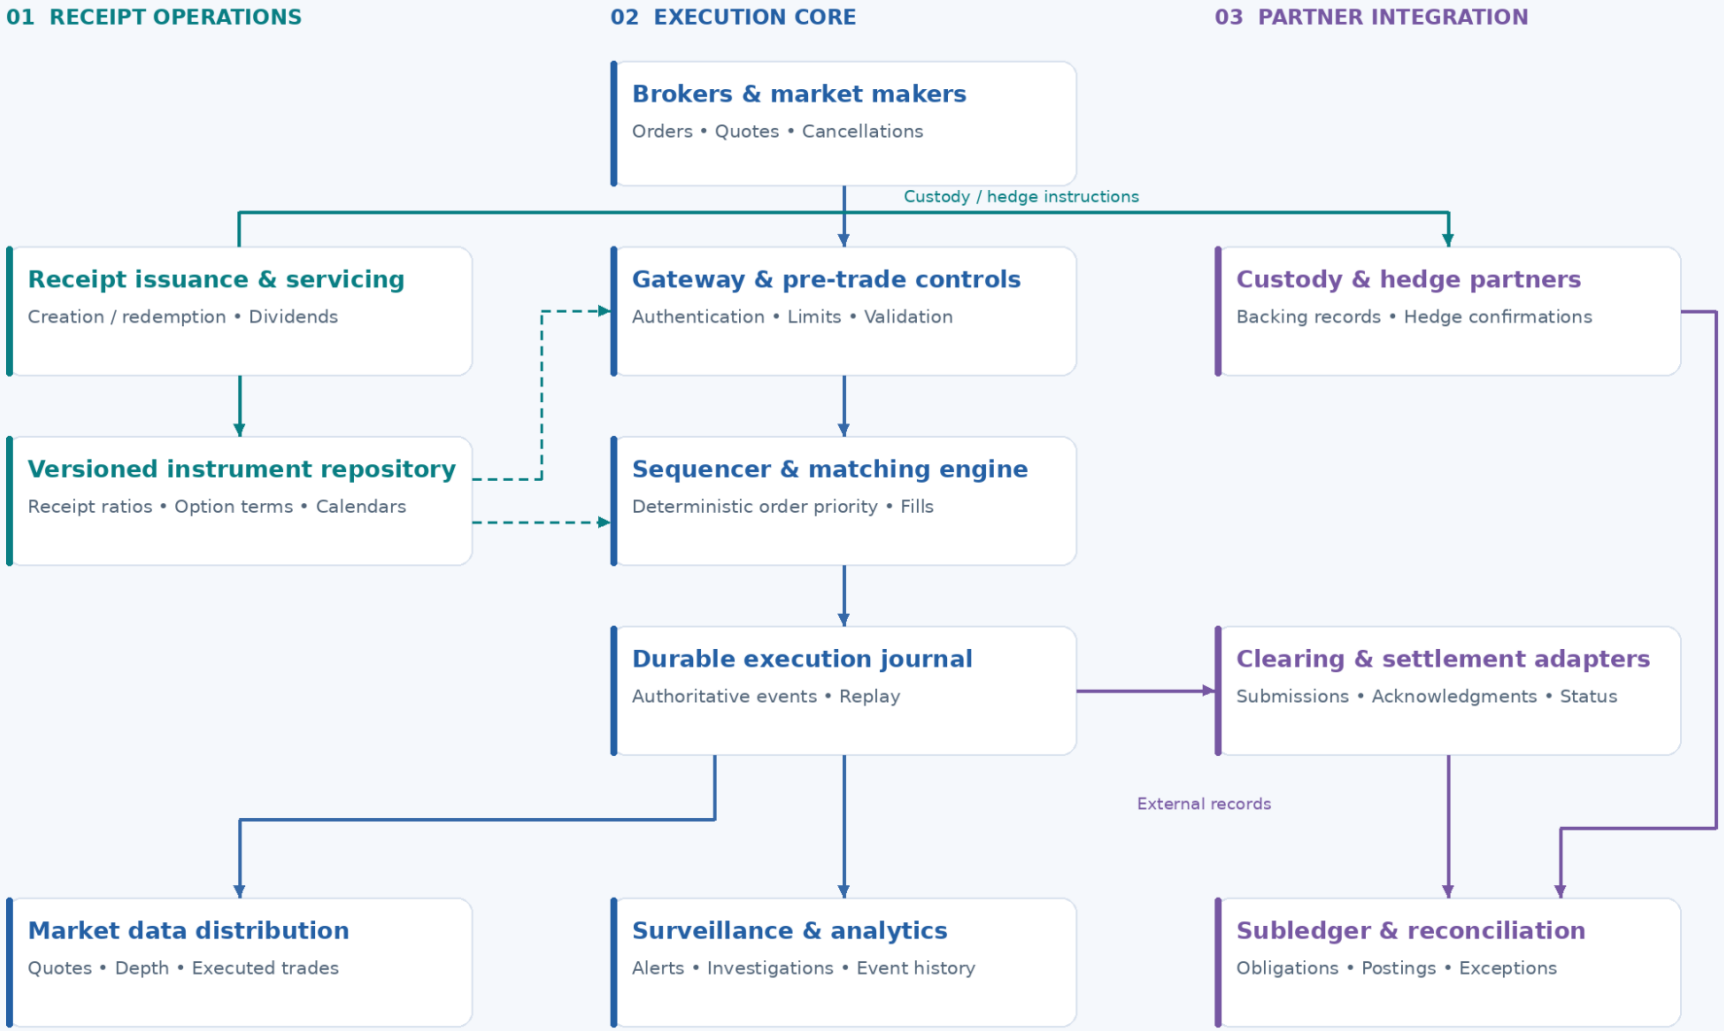

Market adoption of stablecoin to invest in global equity through accountable financial structure.

Payments and crypto indicators support the thesis. Local DeFi use and D-SHARE demand need direct validation.

DEPOSITARY RECEIPTS + OPTIONS

Market system architecture

Conceptual platform • Trading, receipt operations and post-trade reconciliation

Solid arrows: operational / event flows

Dashed arrows: reference data

Cross-cutting: access control • audit trails • monitoring • recovery • controlled configuration

1. Create the product

Fictional GlobalTech series GT-01. One token records one programme receipt unit.

US$1,200	0.01	US$12
Underlying share price	Share per receipt	Indicative receipt value

100 receipts represent one underlying share

Programme design

The sponsor sets the ratio and holder rights. Custody evidence supports issuance. Brokers distribute to eligible investors.

Illustrative value = share price × receipt ratio. Market quotes, fees, taxes and FX can change the actual price.

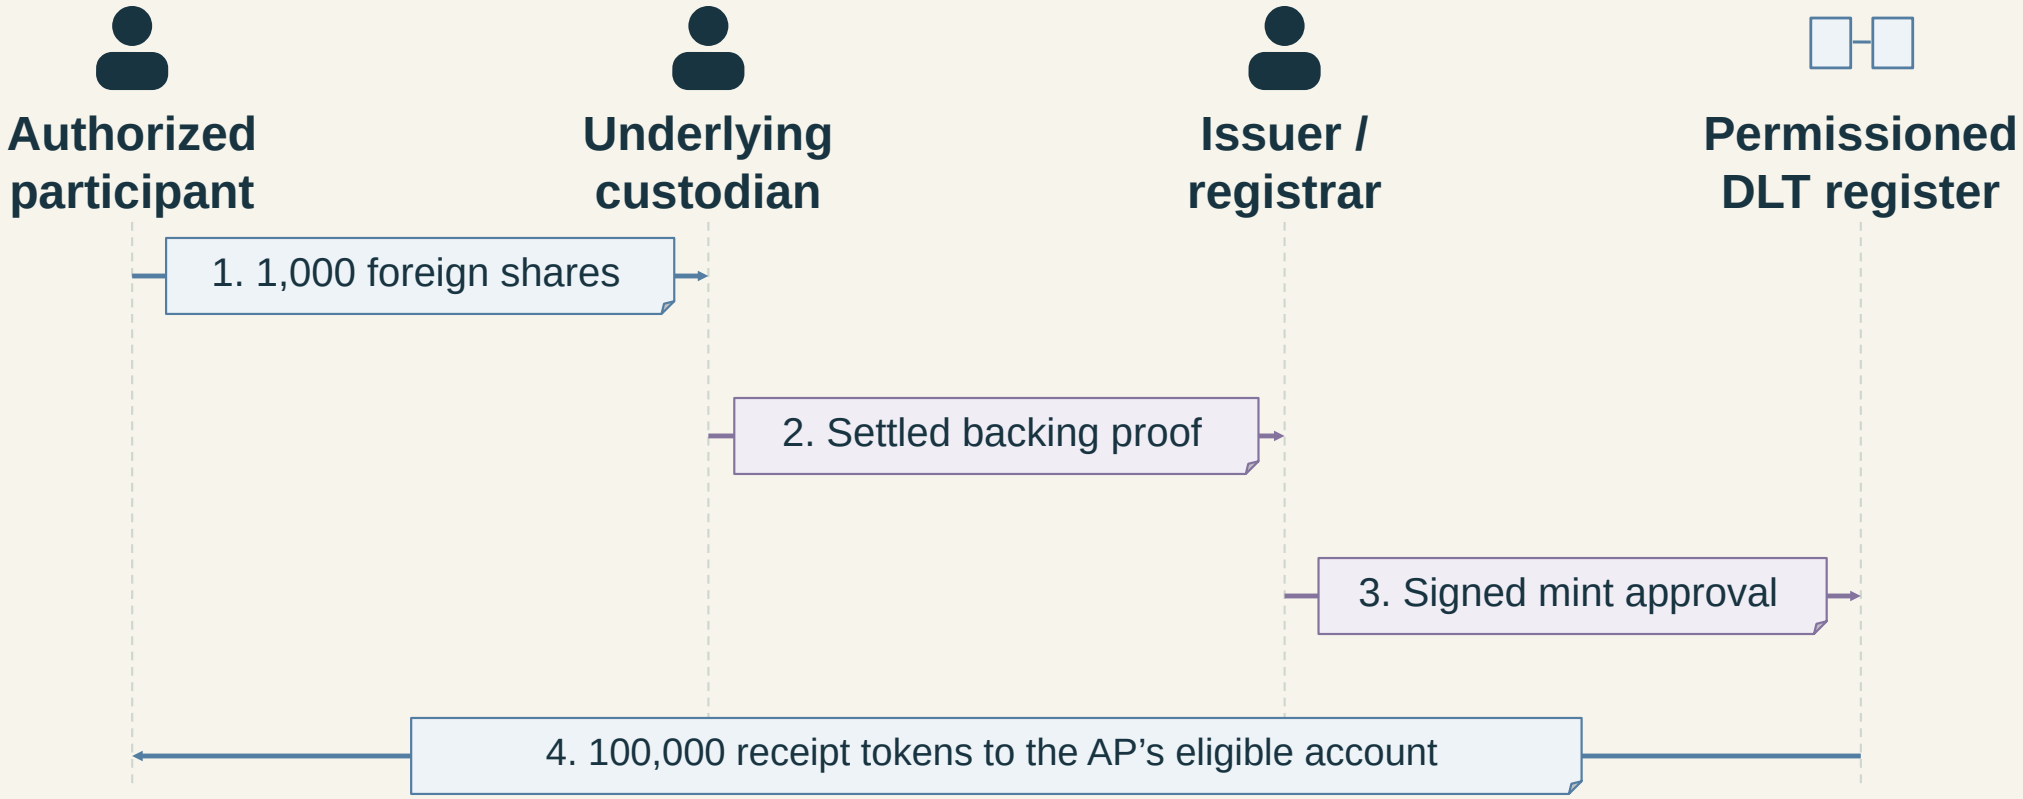

2. Issue receipts backed by shares

Illustrative: 1,000 shares / 0.01 share per receipt = 100,000 receipt tokens.

Blue = securities

Purple = instructions and confirmations

Green = stablecoin cash

Redemption: lock and cancel receipt units, burn tokens, then release the backing.

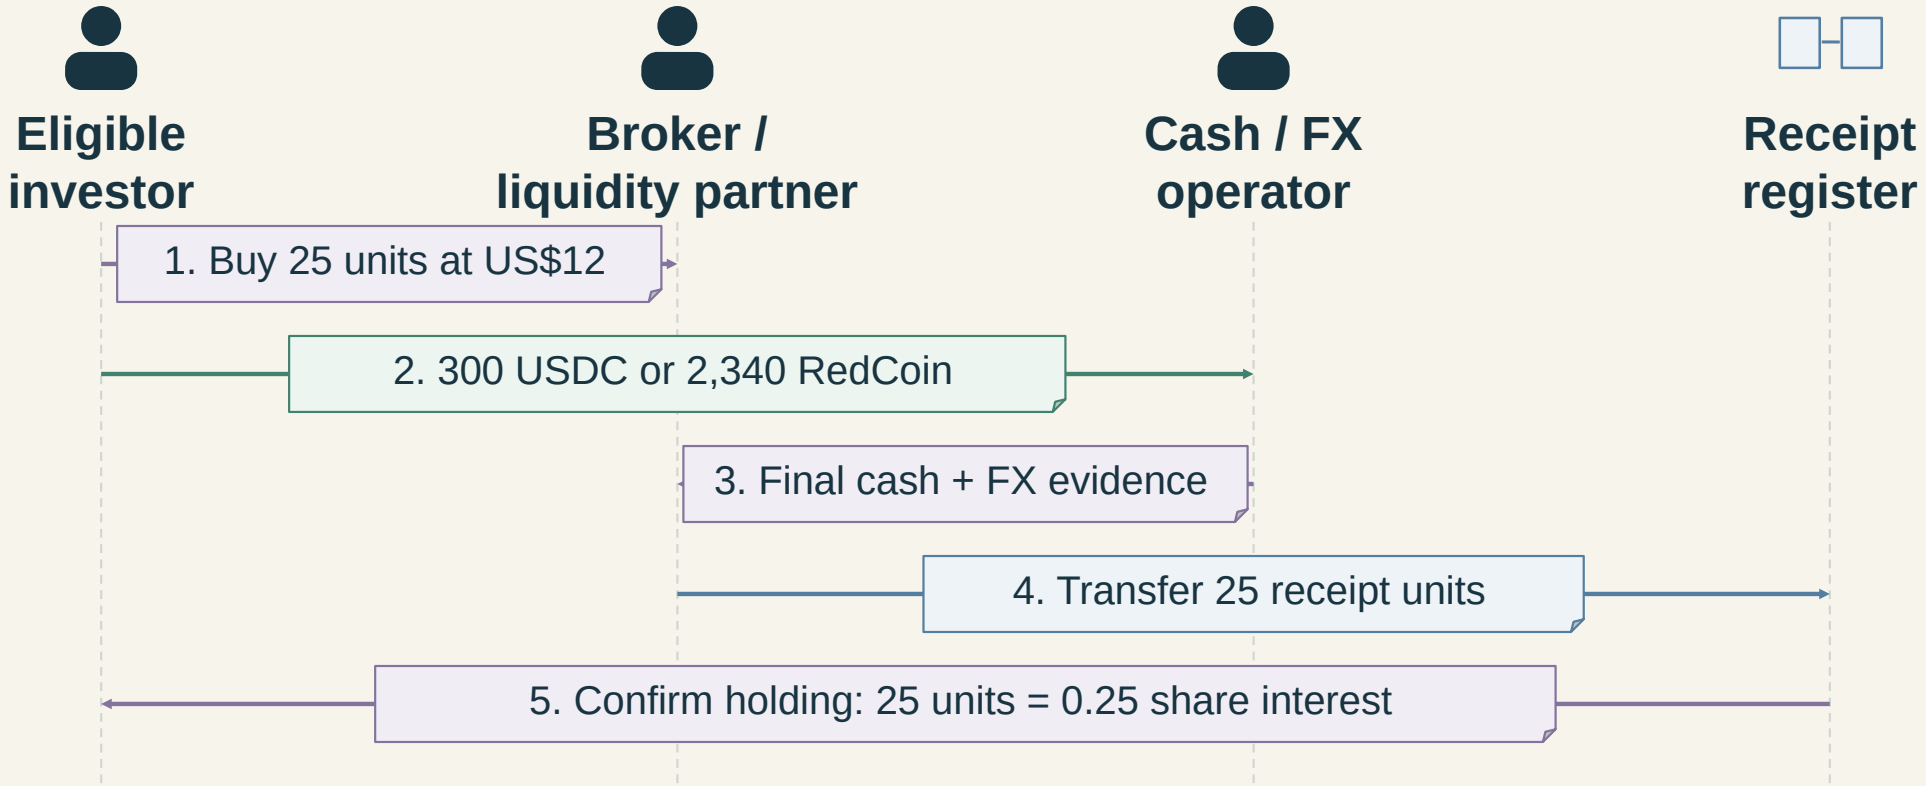

3. An investor buys D-SHARE receipts

25 receipt units at US$12 = US$300, with a 0.25-share economic interest.

Blue = securities

Purple = instructions and confirmations

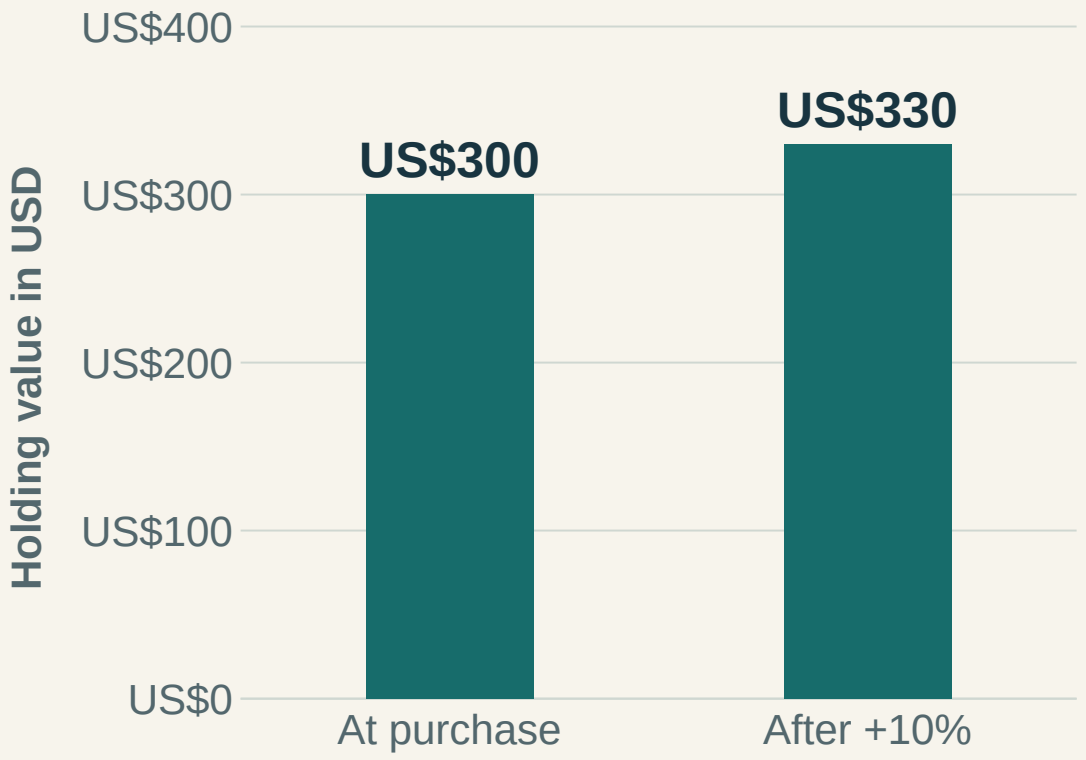

Green = cash or stablecoins

US$300 before fees. Assumes USDC/USD 1, RedCoin/HKD 1 and 7.80 HKD/USD. Rail access remains proposed.

4. The holding value rises in this example

Hypothetical positive scenario. Share price increases 10%, while 25 receipt units remain unchanged.

US$1,200 to US$1,320 per share

25 × 0.01 × US$1,320 = US$330

US$30 unrealized gain (+10%)

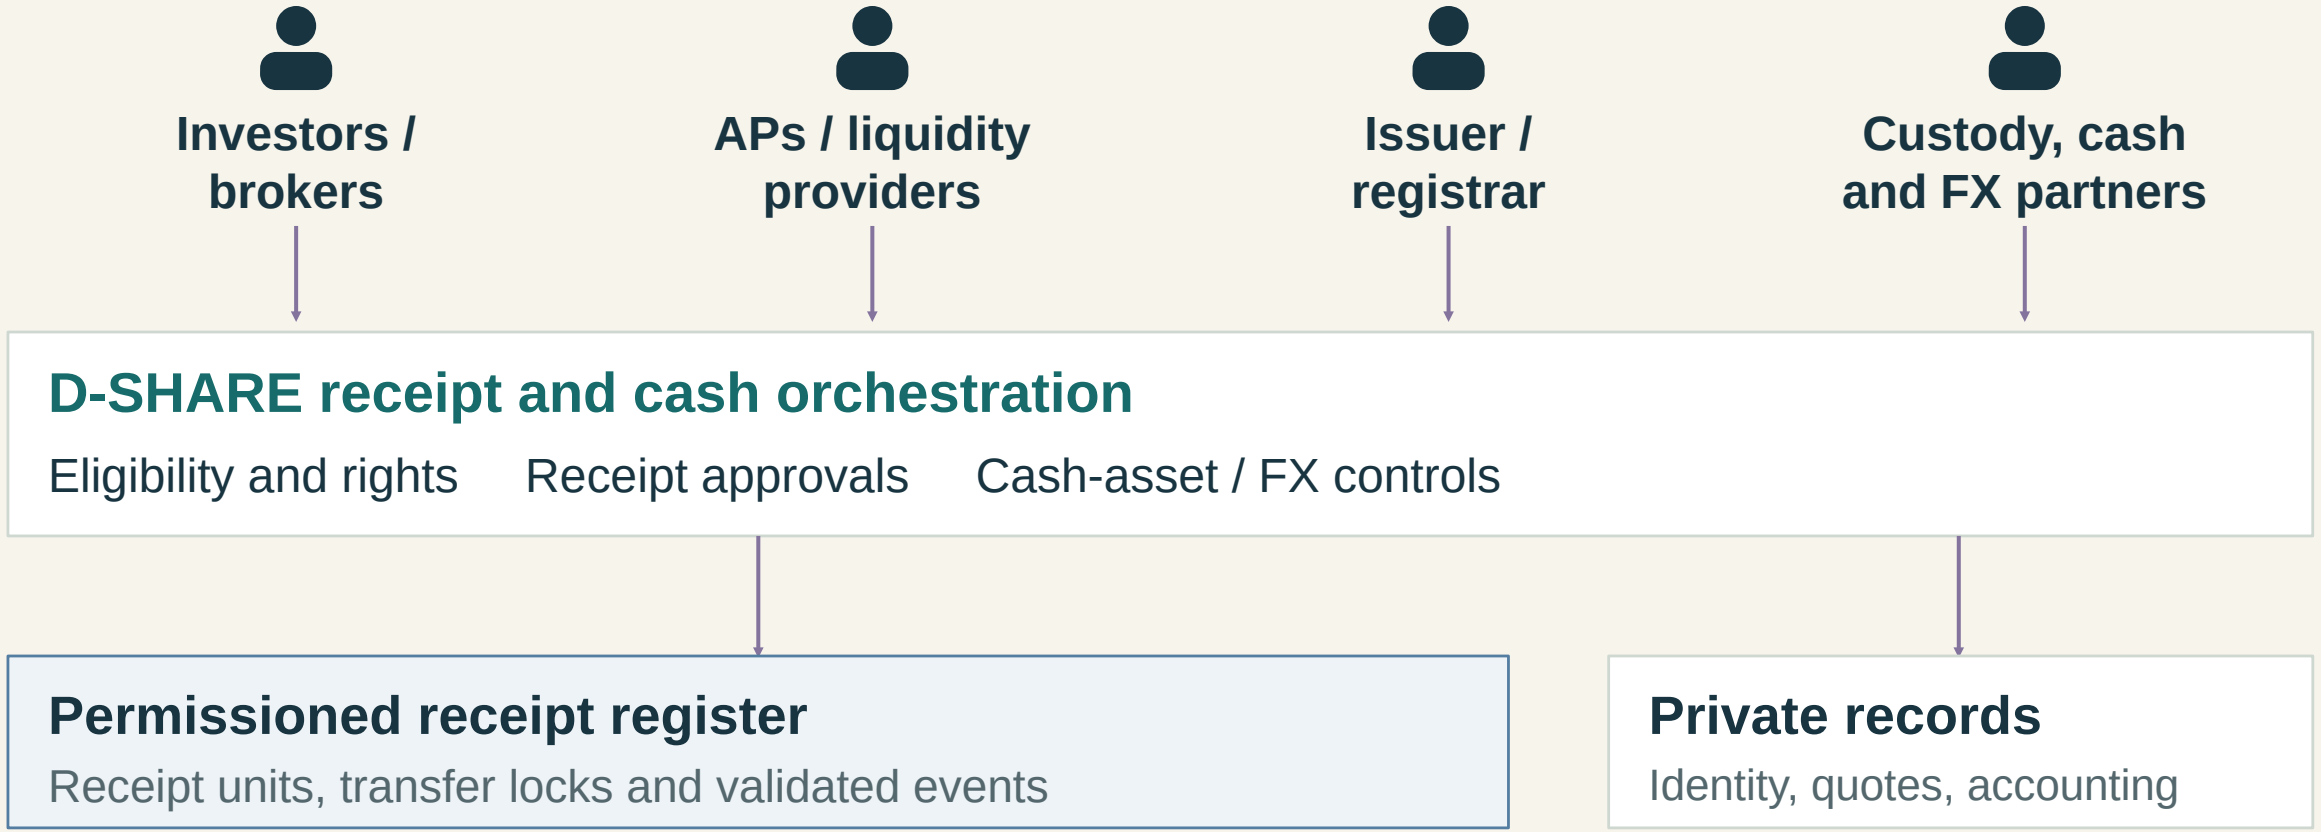

HKD reporting illustration	Value
Initial at 7.80 HKD/USD	2,340.00
Later at 7.82 HKD/USD	2,580.60
Change in HKD value	+10.28%

FX adds HK$6.60 versus an unchanged 7.80 rate.

Before fees and tax. A sale realizes cash proceeds. Equity and FX changes can also reduce value.

DLT architecture for the receipt lifecycle

USDC and RedCoin adapters are proposed. Register rights and rail access remain launch gates.

Custodians hold shares. Cash partners transfer funds. Verified finality gates receipt release.

A sponsor-led revenue model

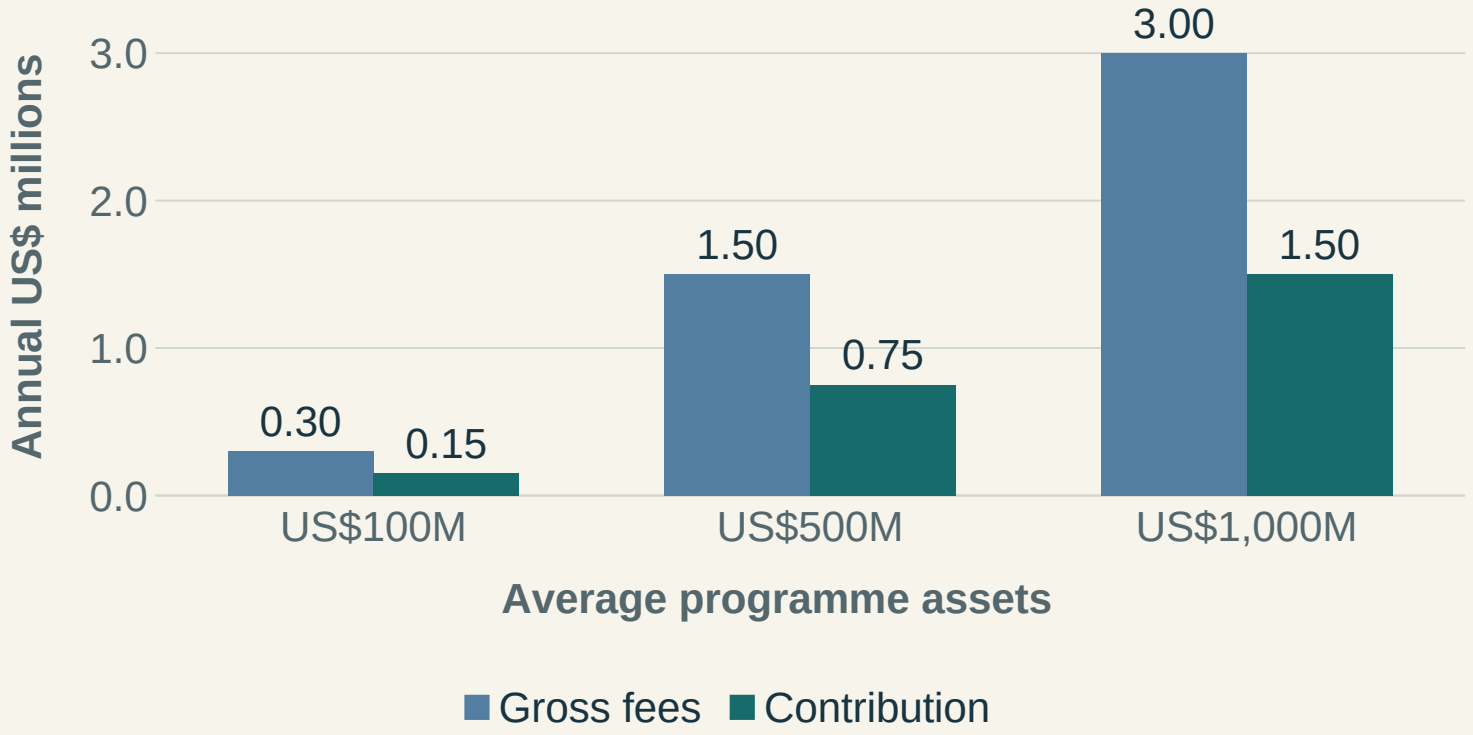

Proposed recurring servicing fees, plus a setup fee for each new sponsor.

Sponsor customer

US$150,000 setup per new sponsor

0.30% annual servicing fee
0.15% variable service costs

Competitive focus
Receipt operations with approved cash adapters

Contribution is before fixed costs and excludes setup fees. Pricing and partner terms require commercial validation.

Distribution through accountable partners

Planning sensitivity. Each series averages US$20M of serviced assets over a full measurement period.

USDC first

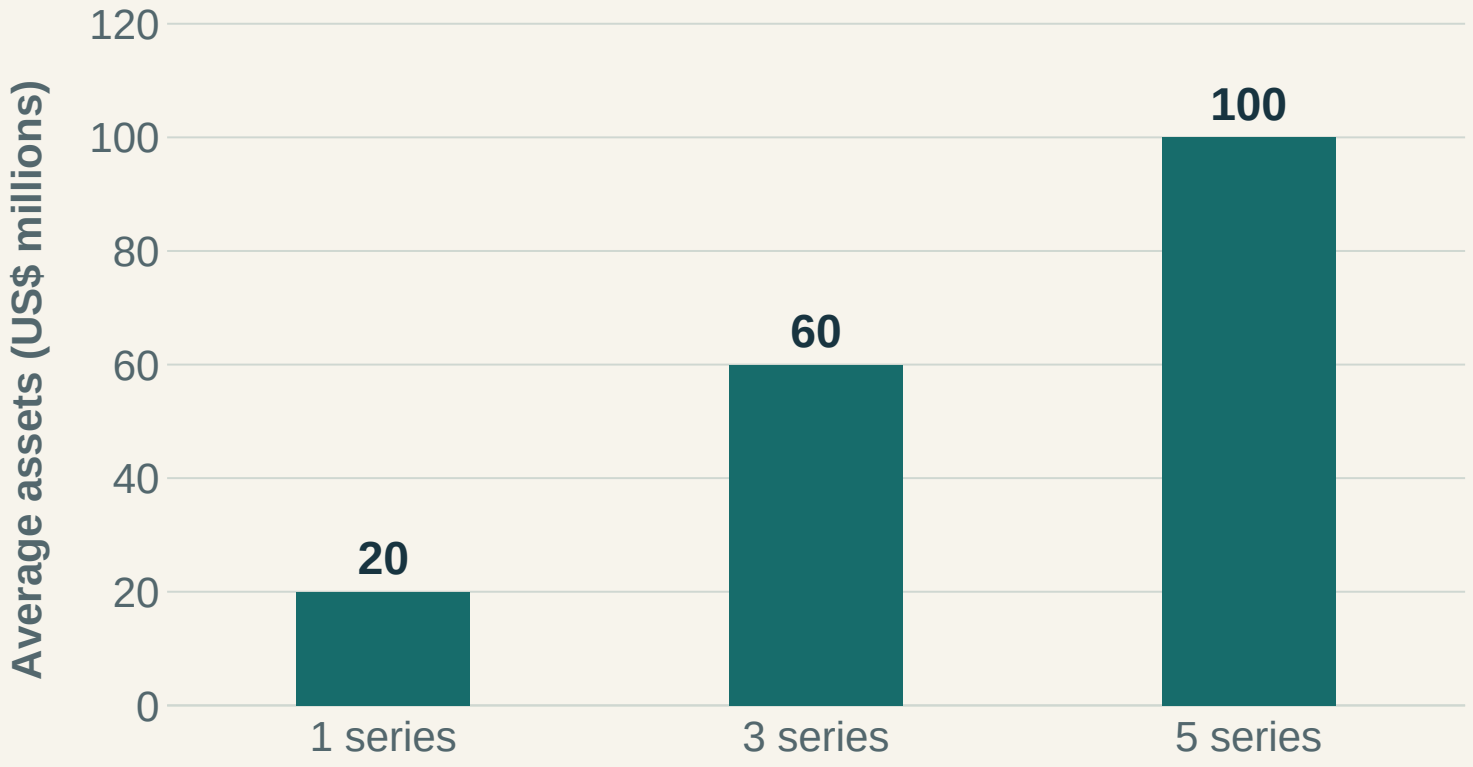

One approved native network and eligible broker accounts

RedCoin access gated

Seek HSBC access with agreed FX terms

Target partner group

1 sponsor, 2 brokers, 2 LPs

Targets are uncontracted. A launch-year ramp can produce lower average assets than its ending balance.

A launch plan with measurable gates

Pre-launch product development. Milestones begin at funding close.

Current foundation

Receipt concept and lifecycle models
Trade and ledger test harness
Target cash-rail architecture

Controls before launch

Programme rights and permissions
Custody proof and reconciliation
Cash finality, audits and recovery

Months 0-6

Sponsor and programme terms

Jurisdiction, rights and priced cash routes

Months 7-12

USDC route and receipt certification

Custody, security and operating acceptance

Months 13-24

Launch and eligible distribution

5 series, 2 brokers, 2 LPs as a planning target

Partner acceptance governs rollout. RedCoin access, capital and liquidity arrangements remain separate launch decisions.

The 24-month planning cash case

US$3M funding, with customer revenue and variable service costs modeled in Year 2.

Cash bridge	US$M
Opening funding	3.00
Add customer revenue	0.45
Less fixed operating spend	-2.70
Less variable service costs	-0.15
Closing cash at Month 24	**0.60**

Year 2 revenue: US$450,000

US$100M × 0.30% = US$300k
+ one US$150k sponsor setup

Year 2 costs: US$1,650,000

US$1.50M fixed + US$150k variable
Variable = US$100M × 0.15%

US$0.60M closing cash includes the US$0.30M unspent contingency

Planning assumptions. Fixed budget: slide 14. Tax, required capital, cash timing and partner minimums remain unmodeled.

The itemized 24-month fixed budget

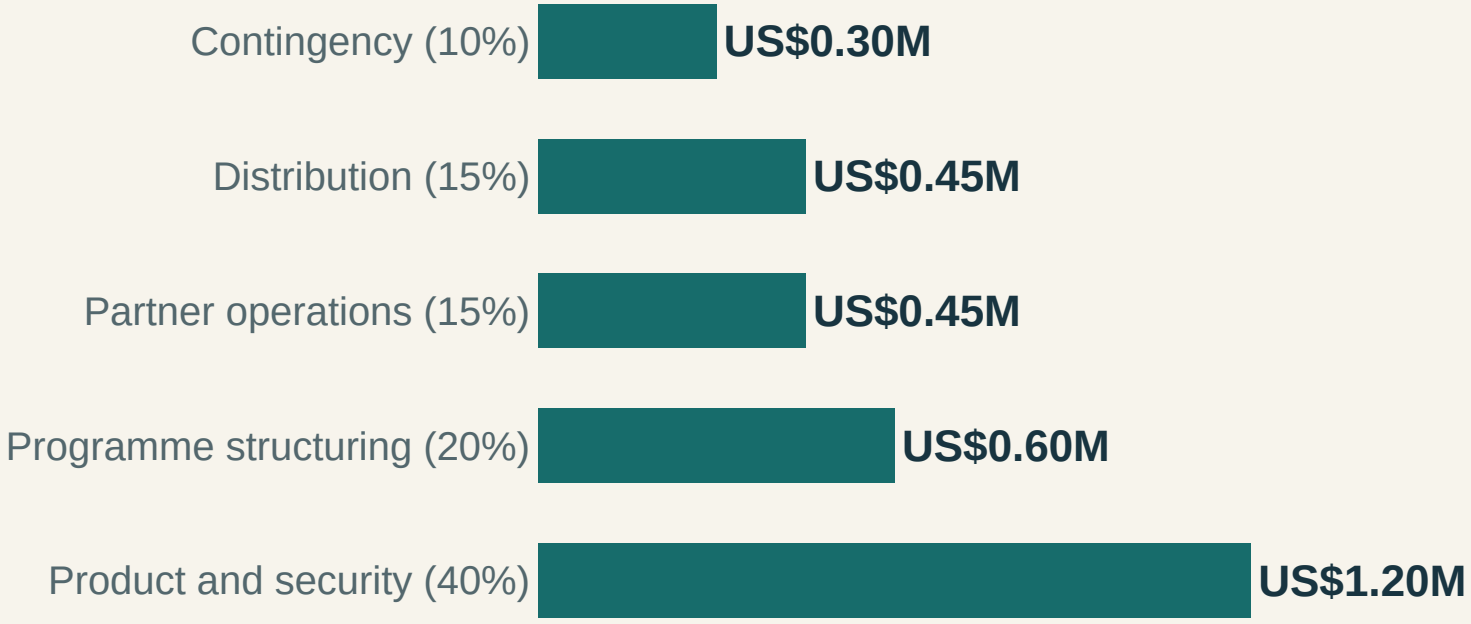

Proposed operating allowances in US$ thousands, subject to priced scope.

Fixed operating line	Year 1	Year 2	24M total
Engineering delivery capacity	300	300	600
Product and integration lead	150	150	300
Security audit and testing	60	120	180
Cloud, data and development tools	45	75	120
Securities counsel / programme docs	240	120	360
Compliance and licensing readiness	90	150	240
Operations and reconciliation capacity	90	150	240
Partner certification and testing	60	150	210
Partner development / account support	120	180	300
Market launch and investor education	45	105	150
Total fixed spending	**1,200**	**1,500**	**2,700**

US$2.70M fixed + US$0.30M reserve = US$3M. Variable service costs and backing inventory are separate.

US$3 million for the first production programme

Expansion capital for delivery and programme readiness over 24 months.

24 months

US$125,000

average monthly funding envelope, including reserve

US$112,500 fixed
+ US$12,500 reserve equivalent

Seeking investors and an anchor programme sponsor
