

Connexium.xyz 2026

Programmable Treasury Accounting, Stablecoin Cash Flow & Multi-Rail Settlement

Unifying corporate double-entry accounting truth, 24/7 stablecoin cash sweeps, and multi-rail routing — with **Supply Chain Finance & Receivables Factoring** as our high-yield application across viable segments.

Treasury & ADA Vaults

Programmable Account of Digital Assets (ADA) managing multi-currency cash sweeps and Circle USDC/EURC reserves.

Dual Accounting Truth

GAAP/IFRS synchronized double-entry accounting bridging ERP general ledgers with cryptographically verifiable settlement.

Business App: SCF

Verity AI dynamic discounting turning Net-60 invoice liabilities into yield-generating early liquidity payouts.

Modernization joint with StableCoin Missed the "Core"

Non-accomplished success at ISO20022 programs and Blind spot remains in treasury-core architecture.

01 Messaging ≠ Core Engine

ISO 20022 modernized transaction messages, but left legacy, batch-processed accounting cores untouched.

02 The DLT Perimeter Rush

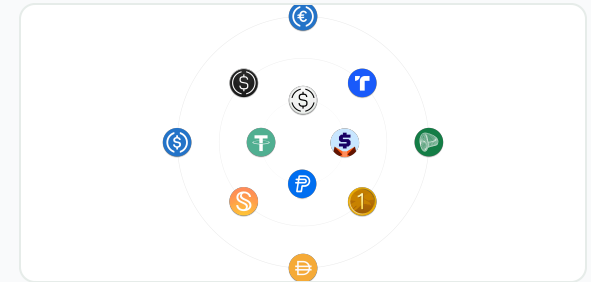

Institutions built external wrappers (RWAs, tokenized deposits) rather than solving core ledger synchronization.

03 The Control Vacuum

Moving tokens wallet-to-wallet without double-entry accounting breaks corporate treasury and audit compliance.

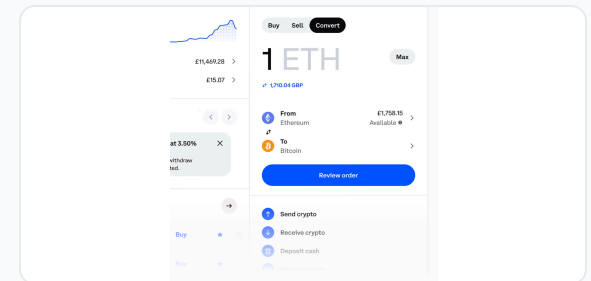

Liquidity Fragmentation: Multi-Chain Chaos

Liquidity Complexity: Diversity of Chains and Coins

The Control Gap: Wallet Misuse in Treasury

The popular prototype Wallet-to-Wallet "coin transfer" lack support to corporate treasury cash flow in reality.

Enterprise Cash Flow emerging inflow of StableCoin

Global B2B commerce relies on fragmented, batch-processed 1970s banking rails

\$150T Trapped Float

Trillions in corporate cash sit locked in transit, buffer accounts, and unpaid Net-60 supplier invoices.

Disconnected Accounting

ERP general ledgers, SWIFT wires, and waybills operate in silos, requiring slow manual reconciliations.

3% to 7% Fee Friction

Intermediary wire fees, correspondent bank cuts, and opaque FX conversion spreads erode enterprise margins.

“ The CFO's Dilemma

"Enterprises are managing 21st-century global supply chains with 1970s batch-processed banking rails. Treasurers lack the infrastructure to program real-time stablecoin cash flows and capture instant invoice yields."

The Ledger Divergence: Conventional Accounting vs. DLT & MPC State

Conventional Ledger

Maintained system of record where state updates via controlled transactions propagating across accounts.

DLT & MPC Computation

Tokenization shifted focus toward multi-party state synchronization (MPC as the true computational mechanism).

Authoritative State Gap

Maintaining transactional or eventual consistency across stablecoins and tokenized deposits is the core design hurdle.

Multi-Trillion Dollar Market Opportunity

Capturing the massive enterprise transition to programmable liquidity and on-chain settlement

\$150 T

GLOBAL B2B PAYMENTS (TAM)

Annual enterprise cross-border cash flow

\$5.2 T

SUPPLY CHAIN FINANCE (SAM)

Unmet trade liquidity & factoring demand

\$25 B

INITIAL TARGET VOLUME (SOM)

High-velocity cross-border trade corridors

 The Platform + Application Playbook

1. Build the Rail (Platform)

GTT payment and treasury router with automated stablecoin cash sweeps.

2. Deploy Flagship App (SCF)

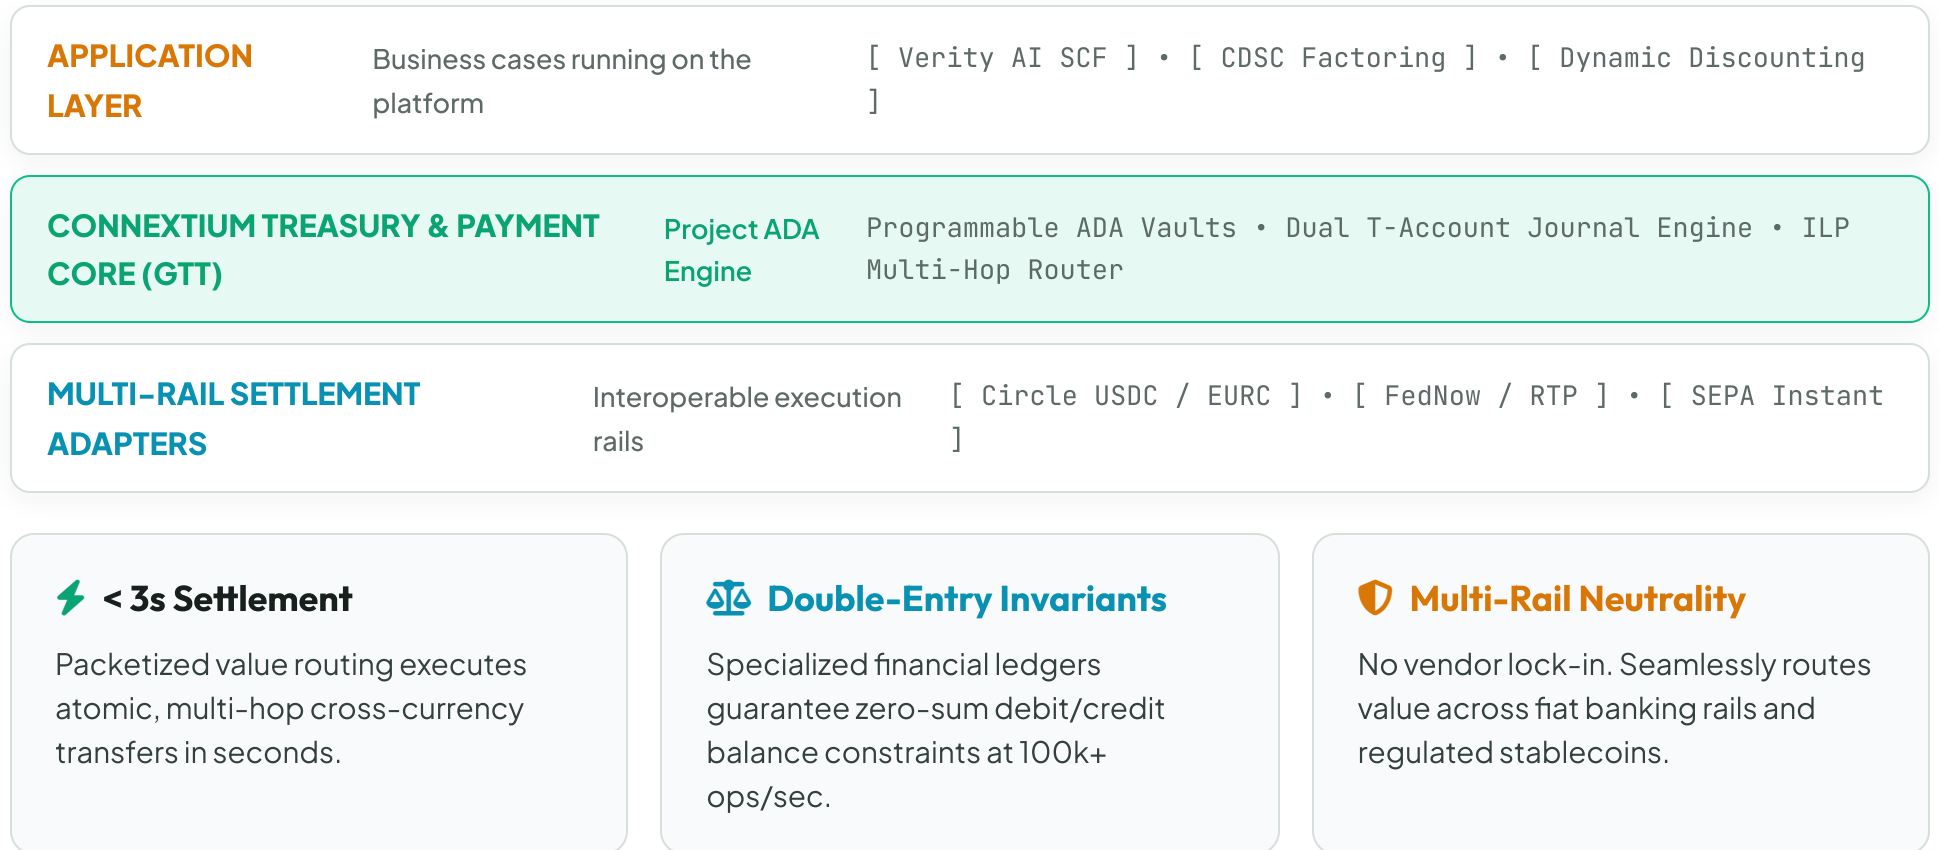

Verity dynamic discounting captures high transaction volume on Day 1.

3. Expand Ecosystem (APIs)

Neobanks, logistics carriers, and fintechs build vertical applications on top.

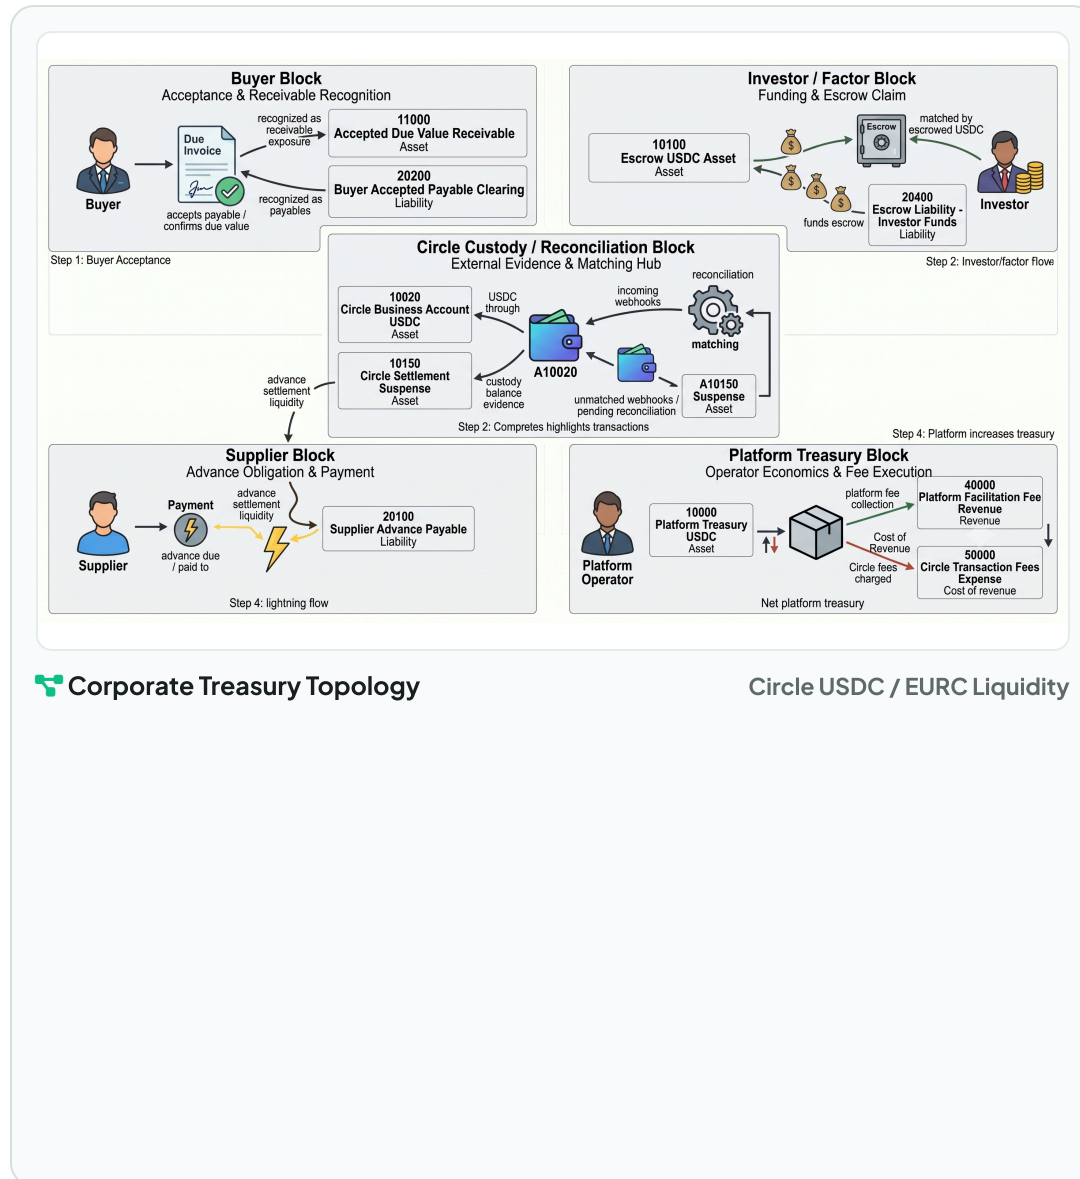

The Connexium Universal Platform Stack

A layered infrastructure connecting ERP business logic to programmable on-chain settlement

Corporate Treasury Structure Embedded with Stablecoins

Multi-tier institutional framework connecting ERP operating cash with programmable Circle USDC/EURC reserves

Tier 1: Bank Operating Accounts

Commercial banking rails handling standard corporate payroll, tax, and fiat wire operations.

Tier 2: Regulated Stablecoin Reserves

Circle USDC & EURC liquidity pools enabling instant, 24/7 cross-border settlement without correspondent bank fees.

Tier 3: Programmable ADA Vaults

Isolated smart vaults holding trade finance escrows with verifiable ledger invariants.

24/7 Automated Sweeps & Rebalancing

Automated liquidity sweeps eliminate trapped float, earning 8%–18% APR in dynamic discounting.

Corporate Treasury Topology

Circle USDC / EURC Liquidity

Case Study: Dual T-Account Accounting & Real-Time ERP Sync

Project ADA: Synchronizing enterprise general ledgers with on-chain settlement across the 3-event lifecycle

EVENT 1: Recognition

P0 Matched

DEBIT (ASSET / EXPENSE)	CREDIT (OPERATING LIABILITY)
Inventory \$100k	A/P \$100k (Net-60)

EVENT 2: Financing & Discount

Early Liquidity Payout

DEBIT (CLEAR VENDOR A/P)	CREDIT (OBLIGATION + YIELD)
A/P \$100k	Obligation \$98.5k
	Yield +\$1.5k (18% APR)

EVENT 3: Settlement

Net-60 Due Date

GAAP / IFRS Compliance

Automatic dual journal posting eliminates manual month-end audit friction across SAP & NetSuite.

Real-Time Yield Capture

Anchor buyers earn 8%–18% annualized APR by discounting invoices with idle stablecoin treasury float.

Solvency Invariant Truth

TigerBeetle ledgers enforce strict zero-sum debit/credit balance proofs on every transaction packet.

Account Servicing & Liquidity Invariants

Precision multi-account liquidity tracking

Asset Liquidity

Pre-funded to absorb cross-currency conversions and stablecoin float. Balance constraint: ≥ 0 .

Peer Credit

Tracks bilateral connector credit lines in real time across routing hops. Balance constraint: ≥ 0 .

Payment Escrow

Escrows outgoing & incoming Open Payments during transit until delivery. Balance constraint: ≥ 0 .

Settlement Account

Anchors net institutional deposits vs. withdrawals against banking reserves. Balance constraint: ≤ 0 .

< \$0.05

Case Study: Supply Chain Finance & Receivables Factoring

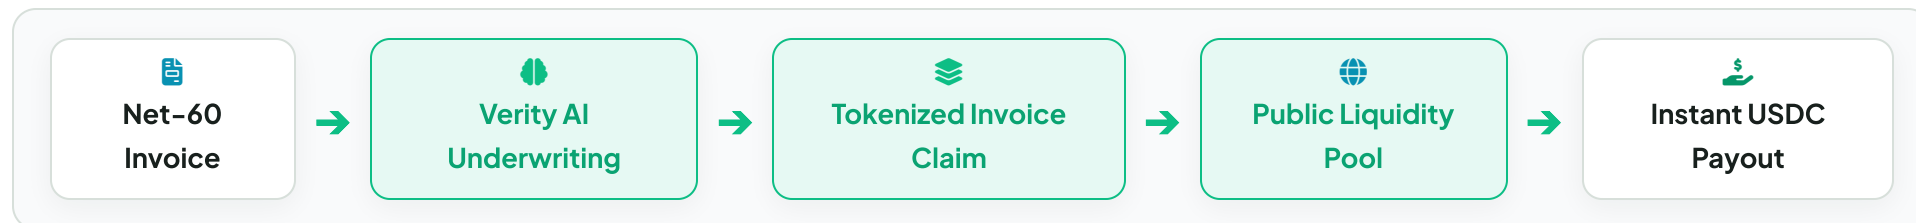

Unlocking broader public market liquidity for invoice assets vs. closed private enterprise networks

INCUMBENTS (MODERN TREASURY / SAP TAULIA)

Optimize receivables strictly within **closed private enterprise networks** — limiting factoring liquidity to internal corporate balance sheets or single-bank syndicates.

CONNEXTIUM DIFFERENTIATOR: OPEN PUBLIC LIQUIDITY

Unlocks broader public market liquidity for invoice assets — creating a publicly accessible market for invoice factoring where institutional capital & liquidity pools compete to fund payouts.

For Enterprise Anchor Buyers

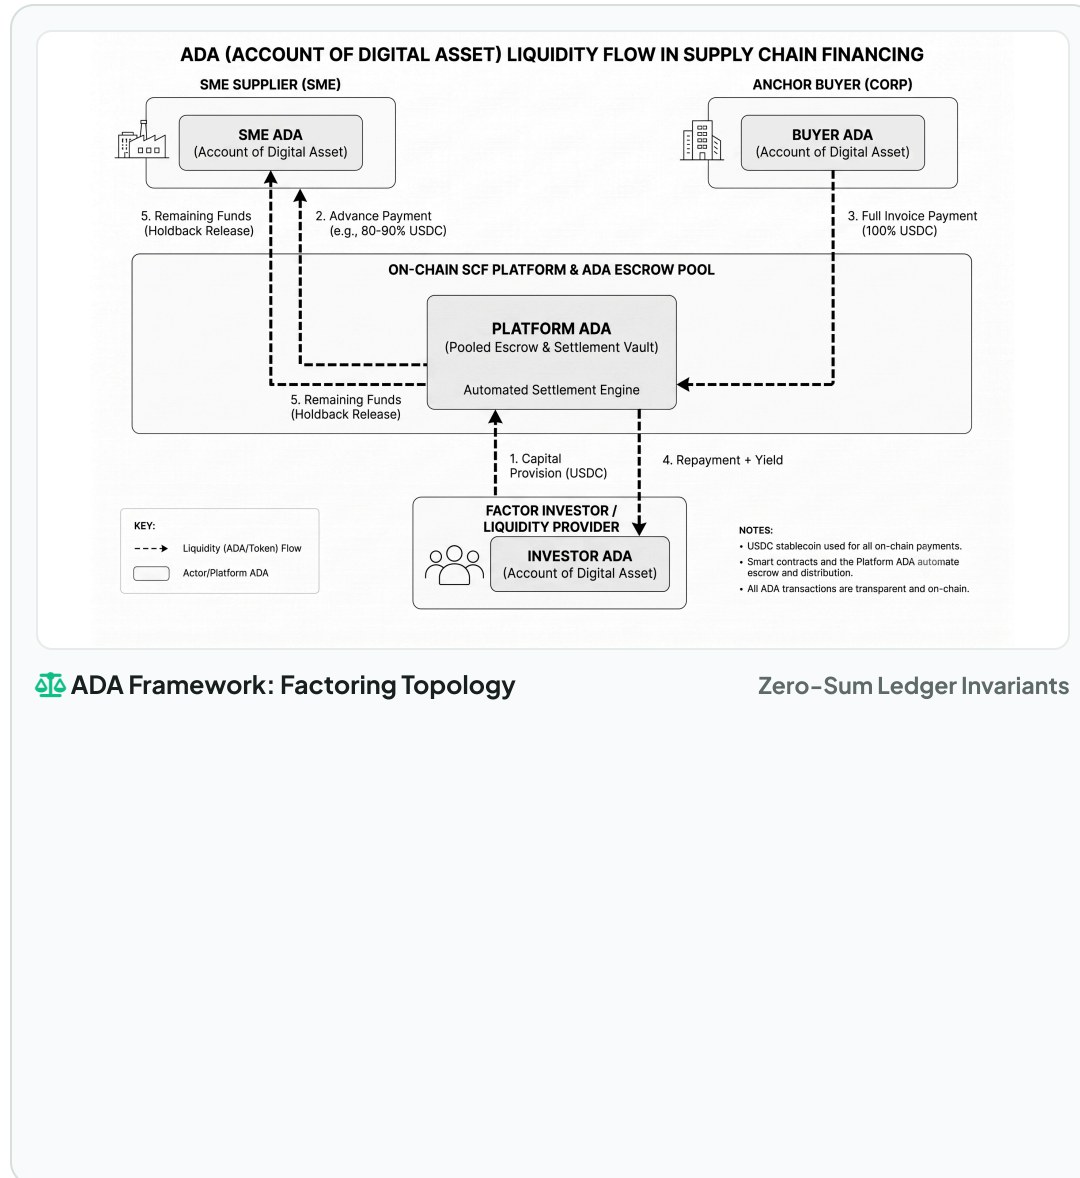

- Deploy idle treasury cash or tap external liquidity pools to earn **8% to 18% annualized APR**.
- Strengthen fragile supplier tiers without adding balance sheet debt or tying up internal working capital.
- Automated ERP journal reconciliation across dual T-accounts with zero manual intervention.

For SME Suppliers & Factoring Market

- Receive instant 24/7 liquidity payouts in USDC or fiat instead of waiting 60–90 days.
- Access open-market competitive dynamic rates (1.5%–3.0%) vs. predatory 15%–30% factoring fees.
- Gain access to a deep, publicly accessible liquidity market with zero single-buyer dependency.

ADA Accounting Framework Applied on Factoring Finance

Account of Digital Asset (ADA): Multi-entity double-entry ledger invariants powering early liquidity receivables payouts

Multi-Entity Vault Topology

Cryptographically isolates **Buyer ADA**, **Supplier ADA**, **Investor ADA**, and **Escrow ADA**.

Zero-Sum Balance Invariants

Strict mathematical rule ($\sum \text{Debit} = \sum \text{Credit}$) guarantees zero double-financing and real-time solvency.

Early Liquidity Payout Swaps

Smart escrow releases instant USDC liquidity to suppliers upon Verity AI risk scoring, locking maturity claims.

Automated Counterparty Mirroring

Simultaneously updates Buyer, Supplier, and Investor ERP accounts with GAAP/IFRS verifiable journal entries.

Verity AI Risk & CDSC Milestone Escrow

Combining AI underwriting with programmable stablecoin cash flow streaming

🏠 Verity AI Risk & Fraud Resolution

- **Multimodal Document Parsing:** Ingests complex multi-currency invoices, POs, and bills of lading in sub-seconds.
- **3-Way Reconciliation:** Cross-checks invoice data with ERP records, logistics telematics, and supplier fulfillment reliability.
- **Cryptographic Anti-Fraud Stamp:** Generates unique invoice fingerprints on-chain to completely eliminate double-financing risks.

🔄 CDSC Continuous Settlement Protocol

- **Milestone Escrow Streaming:** Releases micro-payments automatically as freight passes GPS transit gates and customs checkpoints.
- **Automated Factoring Swaps:** Liquidity providers fund verified invoices instantly, while the CDSC engine routes repayments at maturity.
- **Dual-Entry Sync:** Generates GAAP-compliant debits/credits for enterprise ERPs simultaneously with on-chain proofs.

Automated Risk Assessment:

Sub-Second API Execution (vs. Multi-Day Bank Approval)

Built, Deployed, & Testable Today

We have shipped working alphas across the treasury router and application suite

Live Deployed Environments

Project ADA / GTT Explorer

On-chain payment router & double-entry ledger

Ecosystem Recognition & Benchmarks

• Circle Fintech Bootcamp Selected Project:

Engineered stablecoin commerce & settlement architectures leveraging Circle USDC rails.

• Interledger Accelerator Architecture:

Completed full ILP account servicing entity specifications for multi-tier banks.

• Multi-Tenant Simulator & Ledger:

Live interactive T-Account ledger visualizer with active buyer and admin roles.

Multi-Stream Platform Business Model

Compounding revenue from payment routing take-rates, financing spreads, and enterprise SaaS

📈 Payment Fee

15 – 35 bps

Fee on gross settled transaction volume across multi-rail corridors.

🏦 Financing Spread

1.0% – 2.5%

Net spread on third-party liquidity provided to dynamic SCF pools.

🏢 Enterprise SaaS

\$3k – \$10k/mo

Enterprise platform license for treasury routing & Verity AI module.

🔗 Developer APIs

Usage Tiered

API gateway pricing for logistics, customs brokers, and neobanks.

Milestone	Settled Volume	Enterprise Anchors	Projected Annual Net Revenue
Year 1 (Pilot Phase)	\$50 Million	5 Enterprises	\$750,000
Year 2 (Corridor Scale)	\$350 Million	60 Enterprises	\$3.8 Million
Year 3 (Network Scale)	\$1.8 Billion	220 Enterprises	\$18.5 Million

Value Growing Plan: Roadmap to Series A

Clear operational milestones driving a 5x–7x valuation step-up from Seed to Series A

PHASE 1: MONTHS 1–6

✓ Operational Proof

- Deploy **5 Enterprise Anchor Buyer** pilots across US–APAC corridors.
- Complete **SOC2 Type 1** & MSB state compliance (BSA/AML, KYB/KYC, OFAC).
- Onboard first 25 enterprise suppliers onto Verity SCF Beta.

PHASE 2: MONTHS 6–12

🔗 Volume & Velocity

- Cross **\$50M+ cumulative settled volume** across 5 Enterprise Anchors.
- Expand corridor lanes across suppliers and deep tier discounting.
- Integrate 3rd-party institutional liquidity pools earning 1.0%–2.5% spread.

PHASE 3: MONTHS 12–18

🚀 Series A Inflection

- Hit **\$250M+ annualized run-rate** (\$3.5M+ ARR).
- Launch self-serve Liquidity & API Partner Gateway.
- **Series A Target:** \$8M–\$12M at **\$40M–\$60M valuation (3x–4x Step-Up)**.

SEED ROUND (ACTIVE ASK)

\$2.2M for 15.0% Equity (Valuation round at \$14.7 M)

SERIES A TARGET (ROUND 1)

\$40M – \$60M Valuation (3x–4x Upside)

The Ask: \$2.2M Seed Round (15% Equity)

Valuation round at \$14.7 M to scale payment routing & enterprise pilots

Round Structure & Valuation

Target Investment:	\$2,200,000
Equity Offered:	15.0%
Post-Money Valuation:	\$14,666,667 (\$14.7 M)

Use of Funds (\$2.2M)

45% Platform & Ledger Engineering	\$990.0k
25% Enterprise Pilots & GTM	\$550.0k
20% Compliance, SOC2 & MSB (BSA/AML, KYB/KYC)	\$440.0k
10% Operations & Working Capital	\$220.0k

Tørence Juhe

Founder & Chief Architect / CEO

- **Finance & Payments:** Built & optimized systems across Tier-1 banking projects (Singapore / Europe / Canada).
- **Education:** Business Analytics & Data Science (Singapore Management University), Finance Management.

Dr. Haroël Lee, Ph.D.

Co-Founder & Foundation Head Engineering

- **AI Models & Risk Engine, Crypto & Distributed Systems:** Cryptographic ledger invariants, smart contract verification, and multi-chain settlement protocols.

Join us in building the financial operating system for global commerce.
